**Netflix GPT:** HTML5, tailwindCSS, Javascript, ReactJS, openai, The movie database

- Netflix clone project using React, mimicking the user interface and functionalities of the popular streaming platform. To enhance the user experience and provide personalized recommendations, I integrated the OpenAI API, leveraging its capabilities to generate movie and series suggestions based on user preferences.
- Created a multilingual page for the website
- used multiple react hooks like use-ref use-effect use-location use-navigate
- used APIs of the movie database to fetch movies and series details

**Food Delivery App:** HTML5, CSS, Javascript, ReactJS, Tailwind CSS

- API Integration: Integrated Live Swiggy APIs for fetching restaurant and menu data.
- Designed and developed a dynamic food delivery website utilizing HTML, CSS, JavaScript, React, and Tailwind CSS, delivering seamless user experience and efficient order management. learned about re usability of code
- Leveraging React hooks like useState and useEffect, I managed state and handled component lifecycle, ensuring seamless interactivity and data updates.
- make sure you have allowed cors on browser to access the website

**Paypal Landing page:** HTML5, CSS, ReactJS

- PayPal landing page replica using Tailwind CSS, focusing on achieving pixel-perfect accuracy in design. With Tailwind's utility-first approach, I efficiently crafted the layout, styles, and components, ensuring the page closely resembled PayPal's original design.
- The use of Tailwind CSS enabled rapid development and precise styling adjustments, resulting in a visually appealing and user-friendly PayPal landing page clone
